**RE: An Extrinsic Monolingual Plagiarism Detection Approach of the Bengali Language by Adil Ahnaf, H. M Mahmudul Hasan and Nahid Hossain.**

Dear Editor:

We are submitting the manuscript for possible publication in An Extrinsic Monolingual Plagiarism Detection Approach of the Bengali Language.

Our previous work has some limitations; in this journal, we cover these limitations and add some new features of our system. In our previous work, we mentioned that we created a dataset of Bangla stop words for removing stop-word from sentences. We considered around 224 Bangla stop words as our dataset. We skip some significant Bangla stop-words at that time. Now this time, we consider all 363 Bangla stop-words as our dataset and successfully remove them from our test and train articles. In our previous work, we used Python's built-in library TF-IDF Vectorization function from "sklearn.feature\_extraction.text" to vectorize every sentence. But this is not adequately tokenized every Bangla word. As a result, we manually implemented a TF-IDF vectorization algorithm this time, which aids in the vectorization of all Bangla sentences. We also mentioned that our system could combine all negligible plagiarism sources which named "অন্যান্য(others)." After testing several articles, we analyzed a problem: our system couldn't manage negligible plagiarism sources appropriately while the source article size is not too big. Now we fix this problem successfully. Our previous work plagiarism result had shown only the console. If we want to store this result and share it with others, then it was not possible. That's why we implement a new feature where our system generates plagiarism results in a "docx" file. Along with this, all plagiarized sentences are being highlighted in red color. Our previous system could not able to highlight plagiarized sentences. The significant improvement of our approach is we increase our domain. Our previous system considered only educational domain now we added newspaper domain also.

We hope you will enjoy reading the paper. We are looking forward to seeing your valuable comments.
